

HIGH OUTPUT – LOW NOISE

When it comes to mowing large areas of grass, Etesia's Hydro 124DS is rated as one of the most highly efficient machines on the market. Its unique anti-clog direct rear ejection cutting system ensures greater productivity, even in wet or long grass, and enables professionals to work at faster speeds of up to 16km/h, depending on conditions. Low decibel levels of the machine ensure operator comfort and prevent noise pollution on sensitive sites.

Designed to withstand the rigours of commercial use, Hydro 124DS is quality built for strength and durability. Power comes from a proven 25hp water-cooled 3-cylinder Lombardini diesel engine.

As with all rotaries in Etesia's range, this ride-on is hydraulically operated for ease-of-use, reliability and low maintenance. Hydrostatic drive with forward and reverse pedals, provide variable speeds in both directions. Beneath the cutting deck, two synchronised contra-rotating blades create a powerful vacuum that lifts the grass before it is cut, resulting in a 124cm wide quality finish. An electromagnetic clutch and blade brake form an integral part of the system.

Operated from the driving position, the height adjustment provides six positions from 44mm to 140mm. The machine is fitted as standard with a 600 litres grass box which is hydraulically emptied at ground level without the driver having to leave the seat.

Alternatively, for cut and drop applications, there is an optional rear deflector attachment which spreads clippings evenly, leaving an extremely tidy appearance on the turf.

With Etesia's reputation for quality machines and noted for their reliability and long-life, Hydro 124DS is the preferred choice for commercial end-users looking for a ride-on rotary that does the job – and does it well!

Demonstrations are free and all Etesia models are backed by a nationwide network of specialist dealers.
